

### **ABSTRACT**

An STB (120), to which a printer (130) is connected, includes:  
a reception unit (121) to receive externally update data for updating  
a firmware of the printer and a display content which includes a  
5 description indicating that the update data is to be printed; a display  
data generation unit (122) to generate display data for displaying  
the display content on the TV (123); a remote control reception unit  
(125) to receive a print command for the display content; and a  
print output unit (127) to output, to the printer (130), the update  
10 data, as data to be printed, when the remote control reception unit  
(125) receives the print command.
